is a news site that reports on research about adverse childhood experiences, including developments in epidemiology, neurobiology, and the biomedical and epigenetic consequences of toxic stress.

<https://centerforyouthwellness.org/>

National leader in the effort to advance pediatric medicine, raise public awareness, and transform the way society responds to children exposed to Adverse Childhood Experiences (ACEs) and toxic stress.

<https://www.acesconnection.com/g/aces-in-pediatrics>

Social network that supports communities to accelerate the global ACEs science movement, to recognize the impact of adverse childhood experiences (ACEs) in shaping adult behavior and health, and to promote trauma-informed and resilience-building practices and policies in all communities and institutions — from schools to prisons to hospitals and churches — to help heal and to develop resilience instead of traumatizing already traumatized people.

The Trauma History Questionnaire (THQ) is a 24-item self-report measure that examines experiences with potentially traumatic events such as crime, general disaster, and sexual and physical assault using a yes/no format. For each event endorsed, respondents are asked to provide the frequency of the event as well as their age at the time of the event.

https://www.cehd.umn.edu/fsos/research/ambit/pdf/University%20of%20MinnesotaTSSCA_Final3-27-17.pdf

The TSSCA is intended to assist child-serving professionals in using a trauma screening approach with children ages 5 to 18, who have exposure to a known or suspected traumatic event

The Pediatric Symptom Checklist (PSC) is a brief questionnaire that helps identify and assess changes in emotional and behavioral problems in children.

<http://centerforyouthwellness.org/wp-content/uploads/2018/06/CYW-ACE-Q-CHILD-copy.pdf>

Many children experience stressful life events that can affect their health and wellbeing. The results from this questionnaire will assist your child's doctor in assessing their health and determining guidance.
