

Kognito: Online Hospital ED Training for Suicide and Substance Abuse Screening

Use Kognito's online, interactive simulation to prepare emergency department staff to screen patients at risk for suicide and substance abuse.

LEARN Effective Tactics and Motivational Techniques

- Evaluate and triage patients for risk of suicide and substance abuse
- Identify and address suicidal intent and substance abuse
- Learn discharge procedures and how to complete referral documentation

Screening is IMPORTANT

- In North Dakota, suicide was the ninth leading cause of death in 2010
- North Dakota ranks 11 in the nation for its rate of suicide deaths
- Nationally, 10% of those who died by suicide were seen in an emergency department one month prior to death
- 77% of those who died by suicide visited their primary care doctor within the last year
- 45% had visited their primary care doctor within the last month
